Executive Summary

The Opportunity

Malaysia faces a converging crisis: an aging population is driving exponential healthcare costs, while the B40 segment—80% of the population—lacks the resources for preventive health management. WellnessMyMalaysia proposes an AI-powered mobile platform that transforms how 26 million citizens manage their health through daily habit tracking, intelligent nutrition guidance, and government-backed financial incentives.

26M RM30 100K 3-5x

TARGET B40
POPULATION

PER-USER
INCENTIVE

YEAR 1 USER
TARGET

HEALTHCARE
ROI

This initiative addresses Malaysia's most pressing public health challenge: the absence of a scalable, trackable, and incentive-driven wellness system for the population that needs it most. Current systems cannot track citizen wellness progress, medical records remain fragmented across providers, and there is no mechanism to measure the effectiveness of preventive health programs at a national scale.

WellnessMyMalaysia solves this by creating a single AI-powered platform that scans daily meals, provides nutritional guidance, tracks behavioral changes over 30-day cycles, and builds a national wellness database—all while rewarding citizens for participating. The model is designed for viral growth through a referral system and can scale across ASEAN.

Core Philosophy

We do not tell people to stop eating nasi lemak. We show them how much water to drink alongside it, how much fiber to add, and how to build small habits that compound into lasting health improvements.

This proposal seeks government funding for a 12-month pilot program with quarterly milestone reviews, measurable KPIs, and a clear path to national-scale deployment and ASEAN expansion.

Problem Statement & Market Gap

1

The Healthcare Cost Crisis

Malaysia's aging population is creating unsustainable pressure on government healthcare spending. As citizens age, disease burden increases exponentially, yet the vast majority of expenditure remains reactive—treating illness rather than preventing it.

2

The B40 Paradox

The B40 segment (80% of Malaysians) has the highest disease rates yet cannot afford preventive health management. T20 citizens have the discipline and resources to self-manage; B40 citizens are trapped in a cycle of unaffordable reactive care.

3

Zero Tracking Infrastructure

No centralized system exists to track citizen wellness over time. Medical records are scattered across providers. Government has no mechanism to measure wellness initiative effectiveness. The data simply does not exist.

4

Unregulated Wellness Market

Health product sellers make misleading claims. No standardized wellness coaching certification exists. Citizens lack basic knowledge about nutrition, hydration, and the 8 dimensions of wellness. The market needs structure and education.

The Government's Pain Point

Through direct engagement with MOH, we have identified a fundamental frustration: **the government genuinely wants to find partners who can**

execute, not just propose. Many parties have discussed wellness initiatives before, but none have delivered. MOH has expressed clear willingness to support initiatives that demonstrate real capability and measurable results.

Key Insight from MOH Engagement

"A lot of people have talked about this before. But they haven't done it." —
The government is actively seeking partners who can move from proposal to execution with demonstrated commitment and capability.

Market Gap Visualization

Proposed Solution

WellnessMyMalaysia is an AI-powered mobile application that creates a complete ecosystem for preventive wellness—combining daily habit tracking, intelligent nutrition guidance, medical record consolidation, and government-scale analytics.

How It Works

1. Scan Your Meal

Open the app, point your camera at your food. AI instantly recognizes Malaysian dishes—nasi lemak, roti canai, char kuey teow—and calculates nutritional content.

2. Get Smart Suggestions

Instead of saying "don't eat that," the AI suggests: "Add a glass of water" or "Include fiber-rich vegetables." Build habits, not restrictions.

3. Track 30-Day Progress

Complete a 30-day wellness challenge. See your behavioral

4. Earn RM30 Reward

Complete the program, receive RM30 deposited to your account.

changes over time—dietary patterns, hydration habits, nutritional improvements.

Refer friends for another RM30 each. Government-funded incentives drive adoption.

Critical Design Decision: Real-Time Only

Photos must be taken **in real-time using the camera only**—no gallery uploads permitted. Timestamps and metadata verify authenticity. This ensures data integrity and prevents gaming of the reward system.

Core Features & Functionality

4.1 AI Food Scanner

CAPABILITY	DESCRIPTION	TECHNOLOGY
Meal Recognition	Identifies Malaysian cuisine from camera photo	Computer Vision / Image Classification
Nutritional Breakdown	Calculates calories, macros, fiber, sodium	ML Model + Nutritional Database
Smart Suggestions	Recommends additions (water, fiber, vegetables)	LLM with Wellness Domain Fine-tuning
Anti-Fraud	Real-time only, timestamp/geo verification	Metadata Analysis + Anomaly Detection

4.2 Medical Report Repository

Users can scan and digitize their medical reports. The system extracts and tracks key health indicators over time:

Cholesterol
LDL / HDL LEVELS

HbA1c
DIABETES INDICATOR

Glucose
RANDOM BLOOD SUGAR

Full Panel
COMPLETE BLOOD WORK

4.3 30-Day Wellness Challenge

- ◆ Structured daily habit-building program with progressive difficulty

- ◆ Daily food scanning and nutritional logging
- ◆ Hydration tracking and reminders (the #1 overlooked habit)
- ◆ Before/after behavioral comparison reports
- ◆ Completion certificate + RM30 financial reward

4.4 Referral & Viral Growth Engine

Viral Factor 1: Financial Incentive

"I can earn RM30 just by referring my friends." For B40 users, this is meaningful and motivating.

Viral Factor 2: Simplicity

"This is so easy—I just take a photo of my food." Minimal friction drives word-of-mouth adoption.

4.5 Government Analytics Dashboard

A dedicated web portal for MOH providing real-time visibility into:

- ◆ Population-level dietary patterns and health trends
- ◆ Program participation rates by demographics and geography
- ◆ Behavioral change metrics across 30-day cohorts
- ◆ Financial tracking of rewards disbursed
- ◆ Exportable datasets for policy research and decision-making

4.6 AI Wellness Coach

An AI chatbot trained on 10+ years of real wellness consultation data, providing personalized but responsible guidance. The coach acts as a middle point—understanding more than the average citizen but always referring to medical professionals when needed. It never makes medical claims or replaces qualified healthcare providers.

Technology Architecture

AI Capabilities Matrix

FEATURE	AI TECHNOLOGY	ACCURACY TARGET
Food Recognition	Computer Vision / Image Classification	95%+ for top 200 Malaysian dishes

FEATURE	AI TECHNOLOGY	ACCURACY TARGET
Nutritional Analysis	NLP + Malaysian Nutritional Database	90%+ macro accuracy
Wellness Coaching	LLM with Domain Fine-tuning	Clinically reviewed responses
Medical Report Scanning	OCR + Document Understanding	98%+ key value extraction
Behavioral Prediction	ML Pattern Analysis	Improving with data volume
Fraud Detection	Anomaly Detection + Metadata Analysis	99%+ gallery upload detection

Security & Compliance

PDPA Compliance

Full adherence to Personal Data Protection Act 2010 for all health data handling

End-to-End Encryption

Healthcare-grade encryption for medical records and personal data at rest and in transit

Data Residency

All data stored within Malaysian data centers with no cross-border transfer

Access Control

Role-based access with audit trails for government portal and system administration

The 8 Dimensions of Wellness

WellnessMyMalaysia is built on the internationally recognized 8 Dimensions of Wellness framework. True wellness is not merely the absence of disease—it encompasses the full spectrum of human well-being.

Physical

Food scanning, exercise tracking, medical reports, hydration monitoring, sleep quality

Emotional

Stress management tips, mood tracking, mindfulness prompts, mental health awareness

Financial

RM30 reward system, cost-saving health tips, reduced medical expenses through prevention

Social

Referral system, community challenges, family wellness goals, social accountability

Intellectual

Daily wellness education, nutritional knowledge, understanding your blood test results

Environmental

Sustainable food choices, local produce suggestions, reducing food waste awareness

Occupational

Corporate wellness integration,
workplace health programs,
employee benefit offerings

Spiritual

Holistic wellness approach,
mindfulness integration,
purposeful living guidance

Why This Matters for the Government

A wellness coach certified in all 8 dimensions is fundamentally different from a health product seller. By establishing this framework nationally, Malaysia creates a regulated, professional wellness ecosystem that protects consumers while creating jobs and economic activity.

Go-To-Market & Viral Growth

7.1 Wellness Carnival Launch Strategy

The app will be publicly launched at a **Wellness Carnival Malaysia** event, designed for maximum visibility and immediate user acquisition.

COMPONENT	DESCRIPTION	PURPOSE
Health Screening Booths	Free eye, bone, blood pressure assessments	Draw foot traffic, demonstrate need
App Demo Zone	Live food scanning demos with local cuisine	Showcase AI capabilities
Education Stage	Wellness speakers on 8 dimensions	Build credibility and awareness
Merchant Area	Certified health product vendors	Revenue + ecosystem building
Sign-up Station	On-the-spot registration with first reward	Immediate user acquisition
MOH Presence	Official government endorsement & speeches	Legitimacy + media coverage

7.2 Viral Growth Model

7.3 Merchant Training & Certification

All health product merchants participating in carnivals or the app marketplace must complete a **mandatory wellness education course**. This creates a regulated ecosystem where:

- ◆ Merchants cannot make false medical claims (e.g., "cures cancer")
- ◆ Products are marketed responsibly with evidence-based language
- ◆ The government gains oversight of the wellness product market
- ◆ Consumers are protected from predatory health marketing

7.4 Corporate Wellness Channel

Beyond B40 citizens, the platform offers enterprise wellness programs:

Employee Benefit Package

Companies offer WellnessMyMalaysia as an employee benefit. RM50/employee/month for weekly health scanning and AI wellness coaching. Reduces sick days and improves productivity.

Insurance Integration

Partner with insurance providers (e.g., Hong Leong Insurance) to offer wellness data-driven premium discounts. Healthier policyholders = lower risk = lower premiums.

Implementation Roadmap

MONTHS 1-3 • Q1 — FOUNDATION

Build & Validate

Complete UI/UX design. Train AI food recognition model on top 200 Malaysian dishes. Build core backend and API. Develop government analytics dashboard MVP. Implement PDPA-compliant security framework.

Deliverable: Working prototype for stakeholder demo.

MONTHS 4-6 • Q2 — PILOT LAUNCH

Launch & Learn

500-user closed beta testing. Wellness Carnival public launch event with MOH endorsement. iOS and Android app store deployment. First cohort completes 30-day program. **KPI: 5,000 users, 1,000 completed programs.**

MONTHS 7-9 • Q3 — SCALE

Grow & Optimize

Activate referral viral growth engine. Onboard 10 corporate wellness clients. Publish first population health insights report. Launch medical report scanning feature. **KPI: 25,000 users, behavioral change data published.**

MONTHS 10-12 • Q4 — EXPANSION

Certify & Expand

Graduate first cohort of certified wellness coaches. Complete ASEAN expansion feasibility study. Launch advanced personalized AI recommendations. Comprehensive year-end impact report to MOH. **KPI: 100,000 users, measurable health outcomes.**

Quarterly Funding Model

Budget is structured for **quarterly disbursement tied to KPI achievement**. This de-risks the investment for MOH—pay only for demonstrated progress. Each quarter delivers measurable results that justify the next quarter's allocation.

Budget & Financial Projections

9.1 Year 1 Budget Summary

CATEGORY	Q1	Q2	Q3	Q4	TOTAL
Technology Development					
App Development (iOS + Android)	RM 80K	RM 40K	RM 20K	RM 20K	RM 160K

Corporate Clients	0	0	10	25
User NPS Score	—	50+	60+	70+

10.2 Impact Metrics

Government Value Proposition

Why MOH Should Fund This Initiative

Every RM1 invested in preventive wellness saves an estimated RM3-5 in reactive healthcare costs. WellnessMyMalaysia is the first platform that gives MOH real-time visibility into the wellness of the B40 population—a segment that currently exists in a complete data blind spot.

Data-Driven Policy Making

For the first time, MOH will have a national-scale wellness database to inform evidence-based health policy decisions.

Cost Reduction at Scale

Preventive wellness reduces downstream hospital visits, treatments, and chronic disease management costs.

Population Reach

Digital platform scales to millions without proportional cost increase. Marginal cost per user decreases as adoption grows.

International Showcase

Positions Malaysia as an ASEAN leader in AI-powered public health innovation. Exportable model for regional partnerships.

Economic Impact Model

IMPACT AREA	YEAR 1	YEAR 3	YEAR 5
Users Reached	100,000	1,000,000	5,000,000

IMPACT AREA	YEAR 1	YEAR 3	YEAR 5
Estimated Healthcare Cost Savings	RM 3.4M	RM 34M	RM 170M
Wellness Coach Jobs Created	50	500	2,000
Certified Wellness Merchants	100	1,000	5,000
Database Value (Asset)	RM 2M	RM 25M	RM 100M+

Wellness Coach Certification

A key long-term objective is establishing a **government-recognized wellness coach certification program** that regulates the wellness market and creates professional career pathways.

Certification Pathway

Vision: Market Regulation Through Education

In the future, anyone wishing to sell health products or provide wellness services in Malaysia would need to complete a certified wellness coaching course. This protects consumers, professionalizes the industry, and gives the government oversight of a currently unregulated market worth billions of ringgit.

Integration with ISI & University System

- ◆ ISI provides industry certification framework and endorsement
- ◆ University-level Professional Diploma in Business Consulting pathway
- ◆ HRDC-registered training programs with SKM certification
- ◆ NCS and TTT compliance for trainer qualification
- ◆ Continuous professional development through the app platform

SECTION 13

Risk Assessment & Mitigation

RISK	SEVERITY	LIKELIHOOD	MITIGATION STRATEGY
Low user adoption	Medium	Low	RM30 incentive + referral program + carnival launch create triple adoption pressure
Gaming / fraud	High	Medium	Real-time camera only, AI fraud detection, metadata verification, periodic audits
Data privacy breach	High	Low	PDPA compliance, end-to-end encryption, Malaysian data residency, regular pen-testing
Grant funding delays	Medium	Medium	Quarterly milestone model; technology partner invests upfront at cost price
AI accuracy issues	Medium	Medium	Continuous model training, user feedback loops, expert-reviewed training data
Scalability limits	Medium	Low	Cloud-native auto-scaling architecture, pay-as-you-grow infrastructure
Partner/vendor risk	Medium	Low	Open architecture, no vendor lock-in,

RISK	SEVERITY	LIKELIHOOD	MITIGATION STRATEGY
			documented APIs, escrow arrangements

Partnership & Governance

14.1 Partnership Structure

Wu Huai Wellness Club (ROS)

Project proponent. Government liaison. Wellness domain expertise. 10+ years of consultation data. MOH relationship management. Carnival organization.

Lead Proponent

Wilson Tay / Technology Partner

AI development. System architecture. Technical execution. Cost-price development model. AI training and go-to-market support.

Technology

ISI

Academic endorsement. Certification framework. Industry qualification standards. University pathway integration.

Academic

Ministry of Health (MOH)

Government sponsor. Regulatory guidance. Grant provider. Policy integration. Official endorsement.

Government

14.2 Collaboration Model

Partnership, Not Vendor-Client

This is a **partnership-based collaboration**, not a traditional vendor engagement. The technology partner provides the system at cost price with a profit-sharing model based on value created in the market. This aligns incentives: everyone succeeds only when the platform delivers real impact. The technology partner has committed to investing in a working prototype **before** grant approval, demonstrating genuine belief in the initiative.

14.3 Governance Framework

- ◆ Quarterly steering committee meetings with all partners and MOH
- ◆ Monthly progress reports with KPI dashboards
- ◆ Transparent financial reporting on grant utilization
- ◆ Independent data security audits every 6 months
- ◆ Annual impact assessment and program review

ASEAN Expansion Potential

WellnessMyMalaysia is designed as a replicable model that can scale across Southeast Asia. The B40 healthcare cost challenge is not unique to Malaysia—it exists across the entire ASEAN region.

Total Addressable Market (ASEAN)

COUNTRY	POPULATION	B40 EQUIVALENT	SMARTPHONE PENETRATION	MARKET READINESS
Malaysia	33M	26M	97%	Launch Market
Indonesia	275M	180M	73%	High Potential
Philippines	115M	80M	67%	High Potential
Thailand	72M	45M	78%	Medium
Vietnam	100M	65M	70%	Medium
ASEAN Total	~670M	~400M	Avg 75%	

Vision: ASEAN Wellness Standard Platform

With Malaysia as the launch market and proof of concept, WellnessMyMalaysia can position itself as the **ASEAN standard for AI-powered population wellness management**. Government-to-government partnerships enable regional health

data sharing and create a unified wellness ecosystem across 670 million people.

McKinsey Perspective: What's Next

The following strategic recommendations are structured as an independent advisory assessment, evaluating the initiative's strengths, gaps, and the critical path to maximizing both impact and commercial success.

STRATEGIC RECOMMENDATION

1. Secure a "Lighthouse" Win Before Scaling

The single most important next step is demonstrating a **small, irrefutable proof of concept** before seeking large-scale funding. Government decision-makers are, by your own account, tired of proposals without execution. A 200-person pilot in a single B40 community—run for 30 days with real data—will be more persuasive than any proposal document.

- > **Immediate Action:** Identify one PPR (Program Perumahan Rakyat) community in KL as pilot site
- > Build an MVP app (food scanning + 30-day tracking only—no medical reports, no referrals yet)
- > Run a 30-day pilot with 200 participants, capturing before/after behavioral data
- > Produce a 5-page data report showing measurable behavioral change
- > Present this report—not the proposal—to MOH at your next meeting
- > **Timeline:** 4-6 weeks from today

2. Narrow the MVP Ruthlessly—Do Less, Better

The current proposal contains at least 8 major feature categories. This is a common trap for ambitious founders. Every feature you add before launch is a week you delay proving the core hypothesis. The core hypothesis is simple: "Can an AI app change the eating habits of B40 Malaysians in 30 days?"

- > **MVP features (launch with ONLY these):** AI food scanner, 30-day habit tracker, RM30 reward
- > **Phase 2 features (add after proving core):** Referral system, basic wellness coaching
- > **Phase 3 features (add after 10K users):** Medical report scanning, government dashboard
- > **Phase 4 features (add after government endorsement):** Wellness coach certification, corporate plans, ASEAN expansion
- > This sequencing reduces initial development cost by ~60% and accelerates time-to-market by 8-12 weeks

3. Reframe the Government Pitch: ROI, Not CSR

The current narrative leans toward social good and CSR. While admirable, government budget holders respond to **economic ROI and cost avoidance**. Reframe the entire pitch around one number: "For every RM1 you invest in WellnessMyMalaysia, we will save RM3-5 in downstream healthcare costs."

- > Lead with economics, not empathy. Open every presentation with the cost-savings model
- > Benchmark against Singapore's HealthHub and Australia's MyHealthRecord for credibility
- > Calculate the actual cost of a single diabetes hospitalization (est. RM15K-30K) vs. RM30 prevention incentive
- > Position the database as a **national asset worth RM100M+** within 5 years
- > Frame it as: "You are not funding an app. You are building a national wellness infrastructure."

4. De-Risk Through a Dual-Grant Strategy

Do not put all funding eggs in one basket. The conversation revealed two grant pathways—MOH internal grant and RE-INVEST open grant. Pursue both simultaneously, with different scopes.

- > **MOH Internal Grant:** Fund the app development + 30-day pilot (tech-focused proposal)
- > **RE-INVEST Grant:** Fund the Wellness Carnival + physical screening events (event-focused proposal)
- > Apply for MDEC Digital Content Grant for the AI/ML model development component
- > Explore MTDC (Malaysian Technology Development Corporation) for technology commercialization funding
- > Consider Khazanah's Dana Impak or Yayasan Hasanah for social impact component
- > Each grant application should be self-contained—success on any single grant enables Phase 1

STRATEGIC RECOMMENDATION

5. Build the Data Moat Early—It's Your Real Asset

The app is the vehicle. The data is the asset. From Day 1, every design decision should maximize **the quality, depth, and exclusivity of your wellness dataset**. This dataset becomes the competitive moat that makes WellnessMyMalaysia irreplaceable.

- > Design data schemas for research-grade output from the start (anonymized, structured, queryable)
- > Partner with one university (UM, UKM, or USM public health faculty) to validate data methodology
- > Publish one peer-reviewed paper from pilot data—this transforms the project from "app" to "research platform"
- > Negotiate data licensing terms with MOH upfront: government gets access, you retain commercial rights
- > Target insurance companies (AIA, Prudential, Great Eastern) as Year 2 data licensing customers

STRATEGIC RECOMMENDATION

6. Solve the "Champion Problem" Inside MOH

Government initiatives live or die by internal champions. You need **one senior MOH officer who personally owns this project's success**. Without this, the initiative will stall when personnel rotate or priorities shift.

- > Identify your primary MOH contact's supervisor—brief them directly on the initiative
- > Create a 2-page "Minister-Ready" brief that your MOH champion can escalate internally
- > Offer to present at MOH's internal innovation forum or town hall
- > Make your MOH champion look good—position them as the visionary who brought AI wellness to Malaysia
- > Establish a formal MOU (even non-binding) to create institutional commitment

7. Professionalize the Governance Structure Now

The current structure—operating through an ROS club with mixed personal and organizational interests—creates governance risk that will concern government auditors. This needs to be addressed before large funds flow.

- > Establish a dedicated SPV (Special Purpose Vehicle) company for this project
- > Clearly separate ROS activities, USANA activities, and WellnessMyMalaysia operations
- > Appoint an independent advisory board (include one former government officer)
- > Implement proper financial controls—separate bank accounts, quarterly audits
- > Draft a shareholders' agreement covering IP ownership, profit-sharing, and exit terms
- > This professionalization is not bureaucracy—it's what separates fundable projects from unfundable ones

8. Leverage E100 as a Live R&D Lab

The E100 pitching competition is an underutilized asset. Instead of treating it as a separate initiative, integrate it as the **talent pipeline and innovation lab** for WellnessMyMalaysia.

- > Offer E100 teams the opportunity to build features for WellnessMyMalaysia as their pitch project
- > Best teams get hired/contracted to work on the platform post-competition
- > Wilson's AI engineering support becomes the prize—not just RM3,000 cash
- > This generates free R&D, identifies talent, and creates media-worthy stories
- > Position E100 as "Malaysia's first AI wellness hackathon" for additional media coverage

9. Build Strategic Alliances Before You Need Them

The current partnership structure is founder-heavy. To scale beyond pilot, you need **institutional partnerships** that survive personnel changes and create compounding advantages.

- > **Healthcare:** Partner with one private hospital chain (KPJ, IHH) for medical report integration
- > **Insurance:** LOI with one insurance company (Hong Leong, AIA) for wellness data pilot
- > **Telco:** Partner with one telco (Maxis, Celcom) for B40 data subsidies and distribution
- > **Banking:** Partner with one digital bank (Touch 'n Go, GXBank) for RM30 reward disbursement
- > **Media:** Secure one media partnership (Astro, Media Prima) for the Wellness Carnival
- > Each partnership letter strengthens the MOH proposal immeasurably

10. Create a 90-Day Sprint Plan—Not a 12-Month Roadmap

The 12-month roadmap is necessary for the proposal but **operationally irrelevant**. What matters is the next 90 days. Create a hyper-specific 90-day sprint with weekly milestones.

- > **Week 1-2:** Finalize MVP scope. Wilson builds food scanner prototype. Draft MOH internal grant application.
- > **Week 3-4:** MVP food scanner working on 50 Malaysian dishes. Identify pilot community. Submit MOH grant.
- > **Week 5-6:** Beta test with 50 internal users. Fix critical bugs. Draft RE-INVEST grant application.
- > **Week 7-8:** Launch 200-person pilot in one PPR community. Begin collecting data.
- > **Week 9-10:** Mid-pilot check-in. Adjust app based on user feedback. Prepare data visualizations.
- > **Week 11-12:** Complete pilot. Produce impact report. Present results to MOH. Request formal endorsement.
- > **Week 13 (Day 91):** Decision point—scale or pivot based on pilot data.

Strategic Priority Matrix

Actions prioritized by impact and effort to guide immediate execution decisions:

★ QUICK WINS (DO FIRST) ● Build MVP food scanner (AI can generate 80% of code) ● Identify and approach one PPR community for pilot ● Draft 2-page "Minister-Ready" brief for MOH champion ● Create SPV company structure ● Reach out to one university public health faculty	★ MAJOR PROJECTS (PLAN CAREFULLY) ● Full app development with all Phase 1 features ● Wellness Carnival planning and execution ● Wellness coach certification framework design ● Insurance and telco partnership negotiations ● ASEAN expansion feasibility study
FILL-INS (WHEN TIME ALLOWS) ● Social media content about the initiative ● E100 integration planning for next cycle ● Benchmark research on regional wellness apps ● Merchant certification curriculum outline	AVOID FOR NOW ● Full medical report OCR system (complex, not core) ● Corporate wellness sales outreach (premature) ● Multi-language app support (defer to post-pilot) ● Advanced AI wellness coaching (needs data first)

Critical Success Factors

The Three Things That Will Determine Success or Failure

Execution Speed

MOVE FROM PROPOSAL TO PROTOTYPE IN WEEKS, NOT MONTHS. THE GOVERNMENT HAS HEARD PROMISES BEFORE. SHOW THEM A WORKING PRODUCT.

Data Quality

THE DATABASE IS THE ENDGAME. DESIGN FOR RESEARCH-GRADE DATA FROM DAY 1. THIS IS WHAT MAKES THE PLATFORM A NATIONAL ASSET.

MOH Champion

FIND ONE SENIOR OFFICER WHO WILL STAKE THEIR CAREER ON THIS. WITHOUT AN INTERNAL CHAMPION, NO AMOUNT OF EXTERNAL BRILLIANCE WILL SUCCEED.

Final Advisory Note

The Difference Between a Good Idea and a Funded Initiative

This initiative has genuine potential—it addresses a real problem, targets the right population, and leverages modern AI to do what was previously impossible at scale. However, the gap between "good idea" and "funded, operating initiative" is not bridged by better proposals. It is bridged by **demonstrated execution**. Build the MVP. Run the pilot. Collect the data. Let the results speak. The government—and the market—will follow the evidence.

Conclusion & Call to Action

The Opportunity Is Clear. The Time Is Now.

Malaysia stands at an inflection point. An aging population, rising healthcare costs, and an unserved B40 segment create both an urgent challenge and a transformative opportunity.

WellnessMyMalaysia offers the government a proven framework to address all three—through a single AI-powered platform that is affordable to build, scalable to millions, and designed to generate measurable results from Day 1.

What We Are Asking For

Grant Approval

MOH INTERNAL
GRANT FOR 12-
MONTH PILOT
PROGRAM

Official Endorsement

MOH PRESENCE AT
WELLNESS CARNIVAL
LAUNCH

Ongoing Partnership

QUARTERLY REVIEWS
AND CONTINUOUS
COLLABORATION

What We Commit To Deliver

- ◆ **Working prototype within 6 weeks**—before grant approval, demonstrating commitment
- ◆ **200-person pilot with measurable results** within the first quarter
- ◆ **100,000 users within 12 months** with documented behavioral change data

- ◆ **National wellness database**—Malaysia's first population-scale wellness data asset
- ◆ **Quarterly KPI reports** with full transparency on progress and fund utilization
- ◆ **ASEAN expansion roadmap** positioning Malaysia as the regional wellness technology leader

"We are not asking you to fund a proposal.
We are asking you to invest in a healthier
Malaysia."

Reference: Cal AI Comparison

The proposed app draws conceptual inspiration from **Cal AI**, adapting the model for Malaysian market realities and government-scale deployment.

DIMENSION	CAL AI (REFERENCE)	WELLNESSMYMALAYSIA (PROPOSED)
Food Scanning	Generic international cuisine	Custom-trained on 200+ Malaysian dishes
Tracking	Calorie counting only	Full nutritional + behavioral change tracking
Scale	Individual consumer app	Government-scale population health platform
Pricing	Subscription model (user pays)	Government-funded for B40 (free to user)
Purpose	Personal fitness	National public health + data infrastructure
Incentives	None	RM30 completion reward + referral system
Data Usage	Individual only	National wellness database for policy
Medical Records	Not available	Integrated medical report repository
Certification	Not applicable	Wellness coach certification pathway
